FRAME

All types of sun glasses are made of Grilamid TR90, which is characterized by an extremely high flexural strength, flexibility and lightweight. Grilamid TR90 also excellently resists weather conditions and the effects of UV radiation. This material therefore ensures a long frame durability even during high performance.

POLYCARBONATE LENSES

These lenses are characterized by lightweight and depending on the finish also by high durability and scratch-resistance.

PHOTOCHROMIC LENSES

Photochromic lenses are made of Polycarbonate. Depending on the intensity of UV radiation the lenses will be darker. If the UV radiation is removed (indoors or inside the car), the lenses will return to their clear state. These lenses are recommended to use outdoor only.

POLARIZED LENSES

The sun light itself is not polarized – it becomes polarized after the impact on a shiny surface (snow, water surface or road), when the reflected waves oscillate in two levels – horizontal and vertical. Sunglasses with polarized filter allow only the positive vertically reflected rays to reach your eye. Looking through such sunglasses is comfortable, clear and without glare. The horizontal group of sun rays is blocked out by the polarized filter. These lenses allow a colorful vision, better visual clarity and notable relief for the eyes.

ANTI-SCRATCH COATING

All lenses are equipped with special surface treatment which increases scratch resistance.

ANTI-FOG COATING

This lens treatment prevents fogging for certain time to avoid reduced visibility.

ANTI-WATER COATING

Surface treatment improves off-take of water droplets. It helps to keep the vision clear and without any distortion.

RAZOR

ENDURO HELMET
WITH MIPS®

HELMET RAZOR WITH MIPS®

Razor helmet with integrated MIPS® brain protection system provides you whole new dimension in added safety, comfort and style – all you need to do is just ride. MIPS® Brain Protection System in Razor helmet gives you added protection against rotational violence. Razor with MIPS® is our top Enduro and MTB helmet made with In-mold technology. 23 air channels and rear vents for perfect head ventilation and optimum airflow. New adjusting system provides 5 vertical adjustable positions in the rear part and 2 adjustable positions in front part. With HD Camera Platform you can easy mount your action camera on the top of the shell. Because style really matters, you can match your Razor perfectly to your preferences and find your own colour combination. Each Razor comes with additional spare visor and soft fabric protective bag.

WHEN HITTING THE MOST DEMANDING TRAILS THE ONLY THING YOU WANT TO FOCUS ON IS JUST RIDING. YOUR CONFIDENCE CANNOT BE SACRIFICED FOR ANYTHING ELSE, ESPECIALLY FOR SAFETY AND COMFORT. THEREFORE KELLYS DESIGN TEAM CREATED A BRAND NEW RAZOR – ONE OF THE MOST ADVANCED ENDURO HELMETS EVER PRODUCED.

RAZOR
Juicy Orange
Ruby Red Visor

Because of today's enduro high safety demands, Razor's lightweight shell is made of energy-absorbing materials with in-mould technology. The extended rear part is essential for protecting the back of the head – the most fragile part of your skull. The durable visor secures you against sun reflexes, rain and branches, and is fully adjustable. The specially designed MIPS® low friction layer is placed between the shell and the liner. During an angled impact it allows helmet to slide relative to the head, reducing strain otherwise transmitted to the brain. The best enduro helmet is also a matter of comfort. Thanks to the multi-directional size adjustment system and two shell sizes you can perfectly fit Razor to stay on the trail longer without any discomfort. 23 ventilation holes keep you cool and fresh. The removable lining pads are easy to wash. Enduro and trail riding are full of wonderful moments that you want to record. With Razor's HD Camera Platform you can very easily mount your action camera on the top of the shell. If you feel confident you have to look confident. That's why you can combine 6 different paints of helmet and 8 visors to match your individual style. You can also choose one of inner padding colours: green, gray or blue.

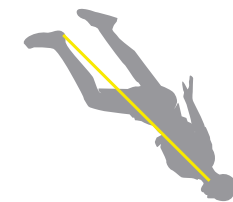

BENEFITS

- Thanks to MIPS Brain Protection System Razor gives added protection against rotational violence to the brain during an angled impact.
- Razor allows you to stay cool and comfortable on trail much longer than other helmets.
- Because style really matters, you can match your Razor perfectly to your preferences and find your own colour combination. Each Razor comes with an additional spare visor.
- Razor provides you with safety, comfort and style – all you need to do is just ride. Ride hard.
- To prevent accidental damage of your Razor and keep it in fine shape for a long time each helmet comes with a special protective bag.

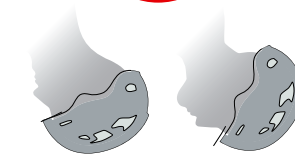

Analytical section of the RAZOR helmet displaying the MIPS low friction layer

THIS IS HOW MIPS WORKS TAKING A FALL WITH A MIPS HELMET IS VERY DIFFERENT

Almost every time you fall*, you fall at an angle. This generates rotational violence to the brain causing concussions and more severe injuries.

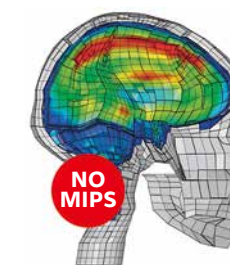

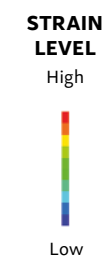

A TRADITIONAL HELMET

Helmets are designed and optimized for a straight fall, giving no consideration to the angled impact. All rotational violence is absorbed by the head and the brain.

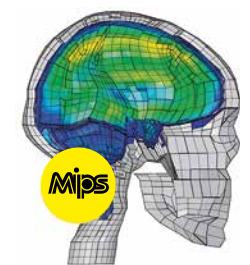

RAZOR HELMET EQUIPPED WITH MIPS®

MIPS is a low friction layer inside the helmet that makes the outer shell of the helmet to rotate relative to the head. This can reduce strain in the brain during angled impacts.

We would like to introduce the new groupsets of KLS bicycle cockpit components. According to the purpose and technical advancement our handle bars, stems and seat posts are set into four groups: ULTIMATE, ADVANCED, ACTIVE and CROSS. Just choose the best group for yourself and enjoy high quality components which fit your individual needs.

ULTIMATE

The ULTIMATE is a group which represents components of the highest quality, designed for the most ambitious and demanding cyclists. Thanks to the highest quality materials and modern manufacturing technologies, these components provide the ULTIMATE performance and lightness for riders who do not accept any compromises.

ADVANCED

Components from the ADVANCED group combine excellent performance and quality materials with the reasonable price. It is an excellent choice for ADVANCED riders looking for optimal solutions with a racing capabilities.

ACTIVE

The ACTIVE group is the best choice for riders who are looking for durable components with a great design at an affordable price. The reliability is number one priority, so every rider can stay ACTIVE in every situation.

CROSS

The CROSS line is dedicated to riders who value comfort and reliability when driving long distances. The special design allows optimal fit and reliability for CROSS and trekking enthusiasts.

AL 7050 – Strongest aluminum alloy, commonly used in rock-climbing equipment, hang glider frames, military, automotive and, of course, bicycle industry. Toughest material, but difficult to weld. That's why it is used mostly for Handle Bars only.

AL 6061 – Aluminum alloy commonly used in home build or hobby aircraft, yacht constructions or scuba tanks. Provides very good ratio between strength and affordability.

DOUBLE BUTTED – 2 thicknesses of material are combined to provide best of both – strength and lightweight. Where the material needs to stand against strong pressure, it is thickened to provide extra strength. On points where the material is not handling that much pressure, it is thinned to reduce unnecessary weight.

T6 – process of increasing the material hardness by heating the material to a certain temperature for certain period of time. Times and temperatures may vary based on materials used. This process arranges atoms in molecular structures which greatly increase the strength of material. Also called "Aging Process"

3D FORGING – Solid block of heated aluminum is compressed into desired mould. Advantage of this technology of forging is that no welding needs to be used, so the component is lighter and stronger in the end.

KLS cleaners and lubricants are premium quality and easy to use products both for riders and professional bicycle mechanics. Carefully chosen ingredients ensure easy application, high effectiveness and they are safe for the environment. Select the desired product line and keep your bike in perfect condition for years.

THE ORANGE LINE - LUBRICATION

The ORANGE line includes various lubricants, such as chain oil, universal oil or premium grease. Products from the orange line allow you to take care of every lubrication point of your bike: from chain, through cables to every bearing and axle. High-quality ingredients and modern additives reduce friction and protect the sensitive parts of a bicycle against excessive wear and corrosion.

THE BLUE LINE - CLEANING

To keep the bicycle clean and shine, and ensure smooth operation of its components, you should reach for the products from the BLUE line. Gentle but very effective cleansing ingredients thoroughly remove impurities, leaving the surface free of dirt, dust and old grease, and prepare the bicycle to put on fresh lubricants.

THE GREY LINE - CARE

Products from the GREY line give finishing touch after cleaning the bike to protect any painted and non-painted surfaces leaving deep shine and prevent dirt and wet from sticking.

SILICONE OIL

Silicone Oil is suitable for oiling and preservation during repairing and maintaining bicycles, particularly shock absorbing forks (do not confuse with oils for filling shock absorbers), O-rings, rubber seals, cables, Bowden cables, and pins in gears or lever-key switches. It may also be used for general oiling.
Spray 200ml

CHAIN OIL

As the name suggests, Chain oil is white lubricant for chains. The lubricant flows easily into the open spaces in the chain, lubricates the chain and protects it against rust. It is also suitable for O-ring chains. It doesn't contain excessive adhesive components and is, therefore, better suited for the lubrication of chains on mountain as well as highway bicycles under all types of conditions, from dust to rain.
Spray 200ml / Applicator 50ml

PREMIUM LUBE WHITE

Bike lube „white“ is a highly effective white grease with content of PTFE (polytetrafluoroethylene) useful for the lubrication of slide and roll bearings, hubs, heads, pedals, etc. The lubricant excels in its high resistance against water and provides a long life for all bearings.
Tube 100gr

MULTIFUNCTIONAL OIL BIO

Multifunctional Oil BIO is a biodegradable all-purpose fluid suitable for general lubrication, loosening of rusted joints, and prevention of corrosion.
Spray 200ml / Applicator 100ml

BIKE CLEANER

Bike Cleaner is a maintenance and cleaning agent for cleaning bicycles from mud and other contamination. Higher foaming ability ensures a lower consumption of the agent. Bike Cleaner is applied by spraying on the contaminated spots (derailleurs, pedals, hubs, frame). It is particularly suitable to clean very contaminated parts (chains, sprockets, etc.) where it adheres due to its foaming ability and thus the product consumption is lower. It does not harm paint.
Applicator 500ml/1000ml

BIKE POLISH

Bike polish is cleaner / degreaser. By simply spraying on the agent it quickly removes grease, oil, dirt and brake fluid. It is suitable for degreasing chains before being lubricated by Chain oil and also degreasing bearings, brake and clutch pads and other metal components.
Spray 200ml

MULTI DEGREASER

„Multi“ degreaser is cleaner / degreaser in one. By simply spraying on the agent it quickly removes grease, oil, dirt and brake fluid. It is suitable for degreasing chains before being lubricated by Chain oil and also degreasing bearings, brake and clutch pads, and other metal components.
Spray 750ml
